IF Period

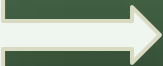

Instructional Focus Period (Math 3)

5<sup>th</sup> Period

Planning

6<sup>th</sup> Period

Math 3

# How to Help Your Child Succeed in Math !

- Make sure they are doing homework every day (including on weekends).
- Assignments are given at every class period and should take about 20-25 minutes.
- Encourage them to form study groups with other students.

- Encourage your child to review the examples in their notes and textbook.
- They can also go to my website and go to the helpful links, in case they are absent or just want to have the material presented again.

- Help them to formulate specific questions.
- “I don’t understand this!” is NOT a question.
- Instead, “Can you help me see how you found the equation in the third line?” will narrow down their uncertainty.

- When students encounter difficulty, have them attend tutorials.
- I am available almost every morning and after school. Also, the math department has help sessions.
- Come in before getting too far behind!

- Remind your child to correct homework and quizzes (even those on which they got an A!).
- It's important that they learn from their mistakes and make plans for improvement in the future.

## • Math 4 parents:

- Do not allow them to slack off during the spring semester.
- Senioritis often sets in once college acceptance letters go out.
- Remind them that you expect them to maintain the performance they have established during their first 3.5 years of high school.
- Spring semester DOES appear on their final transcript!

- Communicate!
- Talk to your child about how they are doing and what they might do to improve.
- Feel free to email me with questions and concerns.

# • A Day in Mrs. Robert's room:

- Students come in and start on their daily warm-up exercise.

- We go over homework. Answers are thoroughly discussed.

- New lesson is introduced with detailed notes and practice problems.

- Students work on practice problems.
