

Lesson #79

- $86 - (-33) = ?$
- Round 813,776,254 to the nearest million.
- Solve for x . $\frac{x+4}{3} = -10$
- Evaluate $ab - a + b$ if $a = 5$ and $b = 3$.
- Find the value of b . $b - 12 = 4b + 3$
- $60 - 9 \cdot 5 + 21 \div 7 - 3 = ?$
- Order these decimals from least to greatest.
6.2 6.02 6.23 6.1
- $-6(3)(-4) = ?$
- $53 + (-21) = ?$

- What is the value of x ? $\frac{1}{3}x + 9 = 20$

- $\frac{8}{9} \bigcirc \frac{7}{8}$

- Find the LCM of $6a^2b^3$ and $8ab^2$.

- Distribute. $6x(3x+5)$

- Solve for a . $5(a-1) = 25$

- Two angles whose measures total 90° are complementary angles. What is the measure of the angle that is the complement of the 41° angle?

- Find the measurement of each angle.

$$\angle AOC \quad \angle AOE$$

- Find the value of x . $\frac{x}{7} + 2 = 12$

- $-|-54| = ?$

- Which is greater, 0.7 or 50%?

- Simplify. $\frac{16a^3b^2c}{20a^2b}$
