

## Problem Solver

**Jack and Jill were practicing batting. Jack's first time at bat, he hit 75 out of a hundred pitches thrown by Jill. Then Jill hit 75 out of a hundred pitches thrown by Jack.**

**Then Jack took a second turn at bat. Jill threw him 50 pitches, and he hit 35 of them. Jill was tired, so she didn't take a second turn at bat. Who had the best average for the day — Jack or Jill?**
